# Palindromic-Type Palindromes

Inder J. Taneja<sup>1</sup>

## Abstract

In the previous papers [9, 13], the author worked with **palindromic-type expressions**. These expressions are by use of operations addition and multiplications. When the operations are removed, we get normal even order palindromes. In the previous works, it is limited to particular cases including patterns. The final sum is either palindromic or non palindromic. The aim of this paper is to write **palindromic-type expressions** when final sums are palindromes. The results are with multiple choices representations, i.e., in some cases palindromes can be written in terms of different **palindromic-type expressions**. Due to high quantity of numbers, the work is limited to 7 digits palindromes. In the another part of the work [14], the **palindromic-type expressions** are given, where the final sums are not palindromes.

## 1 Introduction

A palindromic number is the number that remains the same when its digits are reversed, for example, 121, 3333, 161161, etc. In [6, 7], author worked on palindromic patterns and wrote them in terms of single digit " $a$ ". We shall define **palindromic-type expressions**, i.e., the numbers are not palindromes but appears like palindromes. They are separated by operations of additions and/or multiplications, for example,

- $1343 \times 3421$
- $1225 \times 5221$
- $16 + 61$
- $1825 + 5281$ , etc.

When we remove the operation sign, they becomes palindromes. These types of numbers we call as **palindromic-type expressions**. Some studies in this direction can be seen in [4]. Let us separate these numbers in two categories:

- **Type 1:**

$$\begin{aligned} 1596 \times 6951 &= 2793 \times 3972 \\ 616248 \times 842616 &= 645408 \times 804546. \end{aligned}$$

- **Type 2:**

$$\begin{aligned} 234 \times 111 + 111 \times 432 &= 25974 + 47952 := 73926. \\ 10011 \times 11 + 11 \times 11001 &= 110121 + 121011 := 231132. \end{aligned}$$

The difference is that the first type is only with **multiplication**, and second type is with **addition** and **multiplication**. The work on first type can be seen in author's work [10, 12]. This work is concentrated only on **Type 2**, i.e., **palindromic-type expressions** with **addition** and **multiplication**.

Let's analyse both the expressions given in Type 2. In the first expressions the final sum is non-palindrome, in the second expression the final sum is palindrome. In this case the **palindromic-type expressions** are

$$\begin{aligned} 234 \times 111 + 111 \times 432 &= 25974 + 47952 \\ 10011 \times 11 + 11 \times 11001 &= 110121 + 121011. \end{aligned}$$

Without operations, in each case, we get different palindromes:

- (i) 234111111432 and 2597447952;
- (ii) 1001111111001 and 110121121011.

Since these becomes equal by using operations, that's why we call them as **palindromic-type expressions**. For simplicity, these can be written as

$$ab \times cd + dc \times ba = ef + fe := G, \quad (1.1)$$

where

- $ab$ : Palindrome or Non-Palindrome;
- $cd$ : Palindrome or Non-Palindrome;
- $G$ : Palindrome or Non-Palindrome.

## 1.1 Particular Cases

- (i) In case of **squared expressions**, we have  $ab = cd$  and  $dc = ba$

$$(ab)^2 + (ba)^2 = ef + fa := G \quad (1.2)$$

where " $G$ " may or may not be a palindrome.

- (ii)  $ab$ ,  $ba$ ,  $cd$ ,  $dc$ ,  $ef$  and  $fa$  all palindromes, where the total sums " $G$ " may or may not be a palindrome.

(iii)  $ab$ ,  $ba$ ,  $cd$  and  $dc$  are of equal lengths, where " $G$ " may or may not be a palindrome.

In this paper, our aim to bring general results according to (1.1), where the total sum " $G$ " is always palindrome. For the case, the total sum " $G$ " non-palindrome is done in another work. Due to high quantity of numbers the work is limited to seven digits sum of " $G$ ".

For study in this direction in different situations refer author's work [6, 7, 8]. This work is revised version of author's previous works [9, 13]. For summary of author's work on recreation of numbers refer [11]. From historical point of view refer [1, 2, 3, 5].

## 2 Palindromic-Type Palindromes
