

# Selfie Fractions: Addable and Dottable Together

Received 10/07/16

Inder J. Taneja<sup>1</sup>

## Abstract

A **addable fraction** is a proper fraction where addition signs can be inserted into numerator and denominator, and the resulting fraction is equal to the original. The same is true for **dottable fractions**, i.e., instead of additions we have multiplication. In this work we have written fractions having both the operations, i.e., addition and multiplication. The work is for different digits, i.e., there is no repetition of digits in the same fraction. Also, the numerator is less than denominator.

## 1 Introduction

Kieth [3, 4] for the first gave an idea of *dottable fraction*. It is a proper fraction where multiplication signs can be inserted into numerator and denominator, and the resulting fraction is equal to the original. Keith [3, 4] idea was only with multiplication. For the first time, we extended it to other operations also, such as with *addition, multiplication, potentiation*, etc. We can think all of them together also. See below some examples in each case:

### • Addable Fractions

$$\frac{96}{352} = \frac{9+6}{3+52}, \quad \frac{182}{6734} = \frac{18+2}{6+734}, \quad \text{etc.} \quad (1)$$

### • Subtractable Fractions

$$\frac{204}{357} = \frac{20-4}{35-7}, \quad \frac{726}{1089} = \frac{72-6}{108-9}, \quad \text{etc.} \quad (2)$$

### • Dottable Fraction

$$\frac{13}{624} = \frac{1 \times 3}{6 \times 24}, \quad \frac{416}{728} = \frac{4 \times 16}{7 \times 2 \times 8}, \quad \text{etc.} \quad (3)$$

### • Dottable with Potentiation Fractions

$$\frac{95}{342} = \frac{9 \times 5}{3^4 \times 2}, \quad \frac{728}{1456} = \frac{7^2 \times 8}{14 \times 56}, \quad \text{etc.} \quad (4)$$

### • Mixed Fractions: All Operations

$$\frac{4980}{5312} = \frac{4-9+80}{5 \times (3+1)^2}, \quad \frac{3249}{5168} = \frac{(3+2^4) \times 9}{(5-1) \times 68}, \quad \text{etc.} \quad (5)$$

Observing the examples given in (1)–(5), the numerator and denominator follows the same order of digits in both sides of each fraction. These kind of fractions, we call *selfie fractions*. There are two types of situations. One when all digits appearing in each fraction are distinct and second, when there are repetitions of digits. Initially, we shall work with distinct digits. Due to big number of fractions, later we shall work with repetitions.

The work on addable, subtractable, dottable and dottable with potentiation can be seen in Taneja [28, 29, 30] and is separated as:

1. Selfie Fractions: Addable – Equation (1) – [28];
2. Selfie Fractions: Dottable and Pontentiable – [29];
3. Selfie Fractions: Addable and Dottable Together – this work ;
4. Equivalent Selfie Fractions: Dottable, Addable and Subtractable – [30];
5. Equivalent Selfie Fractions: Addable and Dottable Together – [31].

In the mixed type *selfie fractions*, if we consider only with addition and multiplication, the results are of type:

$$\frac{612}{748} = \frac{6 \times 12}{(7+4) \times 8}, \quad \frac{387}{2064} = \frac{3+87}{20 \times 6 \times 4}, \quad \text{etc.} \quad (6)$$

<sup>1</sup>Formerly, Professor of Mathematics, Universidade Federal de Santa Catarina, 88.040-900 Florianópolis, SC, Brazil. E-mail: [ijtaneja@gmail.com](mailto:ijtaneja@gmail.com).

Still, we have *equivalent selfie fractions* with the same operations, such as,

$$\frac{287}{1435} = \frac{28+7}{(1+4) \times 35} = \frac{2+8+7}{(14+3) \times 5}, \quad \frac{1069}{7483} = \frac{(10+6) \times 9}{7 \times 48 \times 3} = \frac{1+069}{7+483} = \frac{1 \times 06+9}{7 \times (4+8+3)}, \text{ etc.} \quad (7)$$

The difference between *equivalent selfie fractions* and *symmetric equivalent selfie fractions* is that in the first case there are more than one representations for each fraction, while in the second case, by changing one operation by another another, still the fraction remains the same. For more details see author's work [29, ?].

In this paper, our aim is to work with *selfie fractions* with simultaneous use of addition and multiplication as given in expressions (6). The equivalent fractions similar to expression (7) are given in Taneja [?]. Each fraction is with different digits, and numerator is always less than denominator.

The study on numbers in different situations, refer author's work [7]-[27]. For other studies see also [1, 2, 5, 6].

## 2 Selfie Fractions: Simultaneous Use of Addition and Multiplication

This section deals with the *selfie fractions* working with the operations of addition and multiplication simultaneously. Since there are many fractions, we have divided in small subsection, according to position of zero in different categories. The division of subsections is as follows:

- 2.1 Without Zero and Extendable to Ending in Zero;
- 2.2 Without Zero and Non Extendable to Multiple of Ten;
- 2.3 Fractions With Zero in Between;
- 2.4 Fractions Ending in Zero in Numerator;
- 2.5 Fractions Ending in Zero in Denominator.

### 2.1 Without Zero and Extendable to Ending in Zero

There are many *selfie fractions* that can be extended just multiply by 10 either in numerator or in denominator or both. Still, they remains *selfie fractions*. For simplicity, let us consider following three examples:

- $\frac{12}{384} = \frac{1+2}{3 \times 8 \times 4}$ .
- $\frac{273}{468} = \frac{2 \times 7 \times 3}{4+68}$ .
- $\frac{217}{9486} = \frac{2 \times 1 \times 7}{(94+8) \times 6}$ .

Multiplying 10 in denominator of first one, numerator of second one and numerator and denominator both of third one, still we have *selfie fractions* given as follows:

- $\frac{12}{3840} = \frac{1+2}{3 \times 8 \times 40}$ .
- $\frac{2730}{468} = \frac{2 \times 7 \times 30}{4+68}$ .
- $\frac{2170}{9486} = \frac{2 \times 1 \times 70}{(94+8) \times 6}$ .
- $\frac{217}{94860} = \frac{2 \times 1 \times 7}{(94+8) \times 60}$ .

This subsection brings those *selfie fractions* that can be extendable ending in zero. Since the extended fractions are obvious, they are not written in this work. Moreover, this process happens with all dotted fractions [?]. Below are these kind of *selfie fractions*:

- $\frac{12}{54} = \frac{1 \times 2}{5+4}$ .
- $\frac{15}{27} = \frac{1 \times 5}{2+7}$ .
- $\frac{17}{85} = \frac{1+7}{8 \times 5}$ .
- $\frac{18}{36} = \frac{1+8}{3 \times 6}$ .

$$\bullet \frac{52}{78} = \frac{5 \times 2}{7 + 8}$$

$$\bullet \frac{12}{384} = \frac{1 + 2}{3 \times 8 \times 4}$$

$$\bullet \frac{12}{594} = \frac{1 \times 2}{5 + 94}$$

## 2.2 Without Zero and Non Extendable to Multiple of Ten

This subsection bring *selfie fractions* with addition and multiplication without zero and are not extendable to multiple of 10 as subsection 2.1. Since the work is with out zero and is with different digits, obviously, the results are maximum up to nine digits.

$$\bullet \frac{41}{369} = \frac{4+1}{3 \times (6+9)}$$

$$\bullet \frac{261}{348} = \frac{26+1}{3 \times (4+8)}$$

$$\bullet \frac{576}{832} = \frac{5+7+6}{8 \times 3+2}$$

### 2.3 Fractions With Zero in Between

The above two subsections 2.1 and 2.2 brings results without digit 0. This subsection brings results where the digit 0 appears in between each fraction. In this case, the results are up to 10 digits.

$$\bullet \frac{102}{748} = \frac{10 + 2}{(7 + 4) \times 8}$$

$$\bullet \frac{102}{6375} = \frac{1 \times 02}{(6 \times 3 + 7) \times 5}$$

## 2.4 Fractions Ending in Zero in Numerator

The above subsection 2.3 brings results having 0 in between each fraction. This subsection brings fractions ending in 0 in the numerator, but dividing by 10 don't guarantee the existence of *selfie fraction* as in case of subsection 2.1.

$$\begin{aligned}
\bullet \frac{190}{342} &= \frac{1+9+0}{3 \times (4+2)} & \bullet \frac{190}{6745} &= \frac{1+9+0}{(67+4) \times 5} & \bullet \frac{460}{2875} &= \frac{4 \times 6+0}{2 \times (8+7) \times 5} & \bullet \frac{580}{2146} &= \frac{5 \times 8+0}{2+146} \\

## 2.5 Fractions Ending in Zero in Denominator

The above subsection 2.4 brings results having 0 in the numerator, but this subsection brings fractions ending in 0 in the denominator. Again, dividing by 10 don't guarantee the existence of *selfie fraction* as in case of subsection 2.1.

$$\begin{aligned}
& \bullet \frac{135}{480} = \frac{1+3+5}{4 \times 8+0} \quad \bullet \frac{174}{580} = \frac{1+7+4}{5 \times 8+0} \quad \bullet \frac{319}{580} = \frac{3+19}{5 \times 8+0} \quad \bullet \frac{425}{680} = \frac{(4+2) \times 5}{6 \times 8+0} \\
& \bullet \frac{165}{480} = \frac{1 \times 6+5}{4 \times 8+0} \quad \bullet \frac{195}{780} = \frac{1 \times 9+5}{7 \times 8+0} \quad \bullet \frac{392}{560} = \frac{3+9 \times 2}{5 \times 6+0} \\
