Amicable Numbers With Patterns in Products and Powers

Inder J. Taneja¹

Abstract

*There are many ways of writing amicable numbers. One with divisions and sums. The other with pair of powers of each other. There is another way to represent is in product. In this paper, we brings **amicable numbers in pairs** in terms of products and powers. The idea of **self-amicable** is also introduced. Few blocks of **symmetrical amicable numbers** multiples of 10 are also given. Some interesting patterns among amicable numbers are also given.*

1 Introduction

In the history, there are numbers known by “**Amicable numbers**” (see Madachy [3], p. 155). There are many different ways of expressing these numbers. Most famous among them is with operation of addition, such as 220 and 284. In this case the summing the divisors of one we get another number. See below:

Divisors of 284 : 1, 2, 4, 71 and 142

Sum : 1+2+4+71+142 := 220

Divisors of 220 : 1, 2, 4, 5, 10, 11, 20, 22, 44, 55 and 110

Sum : 1+2+4+5+10+11+20+22+44+55+110 := 284.

More studies on this type of numbers can be seen in [3, 4, 5, 6].

The other type of **amicable numbers in pairs** (ref. Madachy [3], p. 165-167) are in terms of squares of each others, for examples,

$$3869 := 62^2 + 05^2 \Leftarrow 6205 := 38^2 + 69^2$$

$$5965 := 77^2 + 06^2 \Leftarrow 7706 := 59^2 + 65^2.$$

...

(1)

Instead of squares of each others, it may happen with same numbers too, for example,

$$1233 := 12^2 + 33^2$$

$$990100 := 990^2 + 100^2.$$

...

(2)

It is not necessary that it happens only with addition, we may have results with subtraction, such as,

$$48 := -4^2 + 8^2$$

$$3468 := -34^2 + 68^2$$

$$416768 := -416^2 + 768^2.$$

...

(3)

More on numbers given in (1), (2) and (3) can be seen in Madachy [3], p. 165-167. Also refer Heinz [2].

Let's write the numbers given in (1) as **amicable in pairs**, and given in (2) and (3) as **self-amicable** numbers.

The examples given in (1), (2) and (3) are with addition and potentiation. Let's write below some examples with multiplications:

$$168 := 19 \times 8 + 2 \times 8 \Leftarrow 192 := 16 \times 8 + 8 \times 8$$

$$248 := 25 \times 8 + 6 \times 8 \Leftarrow 256 := 24 \times 8 + 8 \times 8$$

$$\begin{aligned}
 63 &:= 8 \times 9 - 1 \times 9 \quad \Leftarrow \quad 81 := 6 \times 9 + 3 \times 9 \\
 1267 &:= 187 \times 7 - 6 \times 7 \Leftarrow 1876 := 1 \times 7 + 267 \times 7 \\
 &\dots \tag{4}
 \end{aligned}$$

$$\begin{aligned}
 144 &:= 14 \times 8 + 4 \times 8 \\
 2664 &:= 2 \times 4 + 664 \times 4 \\
 13332 &:= 1 \times 4 + 3332 \times 4. \\
 &\dots \tag{5}
 \end{aligned}$$

The idea of patterns in amicable numbers is not known in the literature. See below some examples **patterns in pairs of amicable numbers** and **self-amicable numbers**:

$$\begin{aligned}
 165 &:= 33 \times 5 + 0 \times 5 = 3 \times 5 + 30 \times 5 \Leftarrow 330 := 1 \times 5 + 65 \times 5 \\
 1665 &:= 333 \times 5 + 0 \times 5 = 3 \times 5 + 330 \times 5 \Leftarrow 3330 := 1 \times 5 + 665 \times 5 \\
 16665 &:= 3333 \times 5 + 0 \times 5 = 3 \times 5 + 3330 \times 5 \Leftarrow 33330 := 1 \times 5 + 6665 \times 5 \\
 166665 &:= 33333 \times 5 + 0 \times 5 = 3 \times 5 + 33330 \times 5 \Leftarrow 333330 := 1 \times 5 + 66665 \times 5 \\
 1666665 &:= 333333 \times 5 + 0 \times 5 = 3 \times 5 + 333330 \times 5 \Leftarrow 3333330 := 1 \times 5 + 666665 \times 5 \\
 48 &:= -4^2 + 8^2 \qquad \qquad \qquad 140400 := -140^2 + 400^2 \\
 484848 &:= -484^2 + 848^2 \qquad \qquad \qquad 14040000 := -1400^2 + 4000^2 \\
 4848484848 &:= -48484^2 + 84848^2 \qquad \qquad \qquad 1404000000 := -14000^2 + 40000^2 \\
 484848484848 &:= -4848484^2 + 8484848^2. \qquad \qquad \qquad 140400000000 := -140000^2 + 400000^2.
 \end{aligned}$$

The numbers given in (4) and (5) are understood as **amicable in pairs** and **self-amicable** numbers in product. The difference is that the numbers given in (1)-(4) are with **power** while in (5) and (6) are with **product**.

The aim of this work is to bring the numbers of type (1)-(5) with positive and negative signs. Some interesting patterns arising due to these numbers are also given. The **self-amicable** numbers are very much similar to **selfie numbers**, **semi-selfie numbers**, **narcissistic type numbers**, etc. For studies on these numbers refer author's work [7]-[17].

2 Product-Type Amicable Numbers

As explained in examples (4) and (5) regarding amicable numbers in pairs and self-amicable numbers with the idea of product. This section bring these kind of numbers by using the idea of product. There are two situations, one in pairs and another as self. In the both the cases, there are numbers with only positive coefficients, and with positive and negative coefficients.

2.1 Amicable Numbers in Pairs

Below are examples of **amicable numbers in pairs**. These are divided in two parts. One with positive coefficients and another with positive and negative coefficients.

2.1.1 Positive Coefficients

3 Power-Type Amicable Numbers

As explained in examples (1), (2) and (3) regarding amicable numbers in pairs and self-amicable numbers with the idea of power. This section bring these kinds of numbers by using the idea of product. There are two situations, one in pairs and another as self. In the both the cases, there are numbers with only positive coefficients, and with positive and negative coefficients.

3.1 Amicable in Pairs

3.1.1 Positive Coefficients

$$\begin{aligned}

4 Patterns in Amicable Numbers

This section brings patterns in amicable numbers in two different situations. One with operation of multiplication and another with powers. In case of product we have results in both types, i.e., in pairs as well as self-type. In case of powers, we have patterns only with self-amicable numbers.

4.1 Product-Type Patterns in Amicable Numbers

This section brings patterns in amicable numbers. These patterns are in two different subsections. One with pairs, and another with self-amicable numbers.

4.1.1 Patterns in Pair of Amicable Numbers

Below are some examples of patterns in pair of amicable numbers. We have written only up to 4th step. Further steps follows by extending in an obvious way.

$$\begin{aligned}
 165 &:= 33 \times 5 + 0 \times 5 = 3 \times 5 + 30 \times 5 \Leftrightarrow 330 := 1 \times 5 + 65 \times 5 \\
 1665 &:= 333 \times 5 + 0 \times 5 = 3 \times 5 + 330 \times 5 \Leftrightarrow 3330 := 1 \times 5 + 665 \times 5 \\
 16665 &:= 3333 \times 5 + 0 \times 5 = 3 \times 5 + 3330 \times 5 \Leftrightarrow 33330 := 1 \times 5 + 6665 \times 5 \\
 166665 &:= 33333 \times 5 + 0 \times 5 = 3 \times 5 + 33330 \times 5 \Leftrightarrow 333330 := 1 \times 5 + 66665 \times 5 \\
 1666665 &:= 333333 \times 5 + 0 \times 5 = 3 \times 5 + 333330 \times 5 \Leftrightarrow 3333330 := 1 \times 5 + 666665 \times 5
 \end{aligned}$$

$$\begin{aligned}

4.1.2 Patterns in Self-Amicable Numbers

Below are some examples of patterns in self-amicable numbers. We have written only up to 4th step. Further steps follows by extending in an obvious way.

$$\begin{array}{ll} \mathbf{132} := \mathbf{1} \times 4 + \mathbf{32} \times 4 & \mathbf{264} := \mathbf{2} \times 4 + \mathbf{64} \times 4 \\ \mathbf{1332} := \mathbf{1} \times 4 + \mathbf{332} \times 4 & \mathbf{2664} := \mathbf{2} \times 4 + \mathbf{664} \times 4 \\ \mathbf{13332} := \mathbf{1} \times 4 + \mathbf{3332} \times 4 & \mathbf{26664} := \mathbf{2} \times 4 + \mathbf{6664} \times 4 \\ \mathbf{133332} := \mathbf{1} \times 4 + \mathbf{33332} \times 4 & \mathbf{266664} := \mathbf{2} \times 4 + \mathbf{66664} \times 4 \end{array}$$

 \end{aligned}$$

Below are some patterns obtained from the subsection 2.1.3 on "Amicable Numbers Multiples of 10". These are very obvious, but are good looking.

$$\begin{aligned}
 110 &:= 1 \times 10 + 10 \times 10 & 220 &:= 2 \times 10 + 20 \times 10 \\
 1110 &:= 1 \times 10 + 110 \times 10 & 2220 &:= 2 \times 10 + 220 \times 10 \\
 11110 &:= 1 \times 10 + 1110 \times 10 & 22220 &:= 2 \times 10 + 2220 \times 10 \\
 111110 &:= 1 \times 10 + 11110 \times 10 & 222220 &:= 2 \times 10 + 22220 \times 10 \\
 1111110 &:= 1 \times 10 + 111110 \times 10 & 2222220 &:= 2 \times 10 + 222220 \times 10
 \end{aligned}$$

$$\begin{aligned}
 330 &:= 3 \times 10 + 30 \times 10 & 440 &:= 4 \times 10 + 40 \times 10 \\
 3330 &:= 3 \times 10 + 330 \times 10 & 4440 &:= 4 \times 10 + 440 \times 10 \\
 33330 &:= 3 \times 10 + 3330 \times 10 & 44440 &:= 4 \times 10 + 4440 \times 10 \\

 3333330 &:= 3 \times 10 + 333330 \times 10 & 4444440 &:= 4 \times 10 + 444440 \times 10
 \end{aligned}$$

$$\begin{aligned}
 550 &:= 5 \times 10 + 50 \times 10 & 660 &:= 6 \times 10 + 60 \times 10 \\

 \end{aligned}$$

$$\begin{aligned}
 770 &:= 7 \times 10 + 70 \times 10 & 880 &:= 8 \times 10 + 80 \times 10 \\
 7770 &:= 7 \times 10 + 770 \times 10 & 8880 &:= 8 \times 10 + 880 \times 10 \\
 77770 &:= 7 \times 10 + 7770 \times 10 & 88880 &:= 8 \times 10 + 8880 \times 10 \\
 777770 &:= 7 \times 10 + 77770 \times 10 & 888880 &:= 8 \times 10 + 88880 \times 10 \\
 7777770 &:= 7 \times 10 + 777770 \times 10 & 8888880 &:= 8 \times 10 + 888880 \times 10
 \end{aligned}$$

$$\begin{aligned}
 990 &:= 9 \times 10 + 90 \times 10 \\
 9990 &:= 9 \times 10 + 990 \times 10 \\
 99990 &:= 9 \times 10 + 9990 \times 10 \\
 999990 &:= 9 \times 10 + 99990 \times 10 \\
 9999990 &:= 9 \times 10 + 999990 \times 10
 \end{aligned}$$

Alternatively, the above patterns can also be written as

4.2 Power-Type Patterns in Self-Amicable Numbers

In this case we have very few examples of patterns with powers.
