Representations of Letters and Numbers With Equal Sums Magic Squares of Order 4

Inder J. Taneja¹

Abstract

This work brings 26 letters from A to Z and 10 numbers from 0 to 9 in terms of blocks of magic squares of order 4. Letters and numbers are constructed with blocks of equal sums magic square of order 4. The most of the letters and numbers constructed are with 5-blocks hight.

1 Introduction

The **Khajuraho magic square** of order 4 is famous in the literature as one of the most **most perfect magic square** of order 4. It is studied around 10th century. The original plate of this magic square seen at **Parshvanath Jain temple in Khajuraho** - (*Link: Wikipedia - <https://goo.gl/nsYn2j>*):

It is also **pan diagonal magic square** of order 4 given in example below.

Example 1.1. Let's rewrite **Khajuraho magic square** as **pan magic square** of order 4.

In this paper, our aim is to bring alphabetical letters from A to Z and numbers from 0 to 9 in terms of blocks of magic square of order 4 with the property that in each case, the blocks of order 4 magic squares are of equal magic sums.

2 Letters from A to Z

We shall construct all the letters from A to Z using blocks **pan magic** squares of order 4. In each letter, the numbers used are without repetition and are consecutive numbers starting from 1 onward. Each letter is complete in itself. The construction of blocks of order 4 is given in Appendix 4.

2.1 Letter A

In this subsection, we construction letter A using 11 blocks of order 4 magic squares. The entries are consecutive numbers from 1 to 176. Let's consider the following distribution:

Example 2.1. Below is a letters "A" written in terms of **pan magic** squares of order 4:

6	91	150	139
163	126	19	78
43	54	187	102
174	115	30	67
5	92	149	140
164	125	20	77
44	53	188	101
173	116	29	68
4	93	148	141
165	124	21	76
45	52	189	100
172	117	28	69
3	94	147	142
166	123	22	75
46	51	190	99
171	118	27	70
2	95	146	143
167	122	23	74
47	50	191	98
170	119	26	71
1	96	145	144
168	121	24	73
48	49	192	97
169	120	25	72

The above letter "A" is composed of consecutive numbers from 1 to 192. These numbers give us 12 blocks of equal sums **pan magic** squares of order 4 with magic sums $S_{4 \times 4} := 386$ as given in Example 4.8.

2.2 Letter B

- The first letter "B" is composed of 16 blocks of **pan magic** squares of order 4 with equal magic sums using the consecutive numbers from 1 to 256 as given in 4.12. The magic sums of each block is $S_{4 \times 4} := 514$.
 - The second letter "B" is composed of 17 blocks of **pan magic** squares of order 4 with equal magic sums using the consecutive numbers from 1 to 272 as given in 4.13. The magic sums of each block is $S_{4 \times 4} := 546$.

We have written the letter "C" in two different ways.

- The first letter "C" is with consecutive numbers from 1 to 176 resulting in 11 **pan magic** squares of order 4 with equal magic sums $S_{4 \times 4} := 354$ as given in Example 4.7.
- The second letter "C" is formed by consecutive numbers from 1 to 144 resulting in 9 **pan magic** squares of order 4 with equal magic sums $S_{4 \times 4} := 290$ as given in Example 4.5.

We have written the letter "D" in two different ways.

- The first letter "D" is with consecutive numbers from 1 to 192 resulting in 12 **pan magic** squares of order 4 with equal magic sums $S_{4 \times 4} := 386$ as given in Example 4.8.
- The second letter "D" is formed by consecutive numbers from 1 to 160 resulting in 10 **pan magic** squares of order 4 with equal magic sums $S_{4 \times 4} := 322$ as given in Example 4.6.

- The above letter "E" is composed of consecutive numbers from 1 to 160. These numbers give us 10 blocks of equal sums **pan magic** squares of order 4 with magic sums $S_{4 \times 4} := 322$.
- The above letter "F" is composed of consecutive numbers from 1 to 128. These numbers give us 8 blocks of equal sums **pan magic** squares of order 4 with magic sums $S_{4 \times 4} := 258$.

We have written the letter "G" in three different ways.

- The first letter "G" is with consecutive numbers from 1 to 256 resulting in 16 **pan magic** squares of order 4 with equal magic sums $S_{4 \times 4} := 514$ as given in Example 4.12.
- The second letter "G" is formed by consecutive numbers from 1 to 176 resulting in 11 **pan magic** squares of order 4 with equal magic sums $S_{4 \times 4} := 354$ as given in Example 4.7.
- The third letter "G" is of elevator type formed by consecutive numbers from 1 to 160 resulting in 10 **pan magic** squares of order 4 with equal magic sums $S_{4 \times 4} := 322$ as given in Example 4.6.

We have written the letter "M" in two different ways.

- The first letter "M" is with consecutive numbers from 1 to 208 resulting in 13 **pan magic** squares of order 4 with equal magic sums $S_{4 \times 4} := 418$ as given in Example 4.9.
- The second letter "M" is formed by consecutive numbers from 1 to 240 resulting in 15 **pan magic** squares of order 4 with equal magic sums $S_{4 \times 4} := 482$ as given in Example 4.11.

2.11 Letters N and O

Example 2.11. Below are letters "N" and "O" written in terms of **pan magic squares** of order 4:

5	100	161	152

We have written the letter "W" in two different ways.

- The first letter "W" is with consecutive numbers from 1 to 208 resulting in 13 **pan magic** squares of order 4 with equal magic sums $S_{4 \times 4} := 418$ as given in Example 4.9.
- The second letter "W" is formed by consecutive numbers from 1 to 240 resulting in 15 **pan magic** squares of order 4 with equal magic sums $S_{4 \times 4} := 482$ as given in Example 4.11.

2.17 Letter X and Y

Example 2.17. Below are letters "X" and "Y" written in terms of **pan magic** squares of order 4:

133 84 25 48 134 83 26 47 135 82 27 46											

The letter "Z" is formed by consecutive numbers from 1 to 144 resulting in 9 **pan magic** squares of order 4 with equal magic sums $S_{4 \times 4} := 290$ as given in Example 4.5.

3 Numbers from 0 to 9

In this section, we shall write numbers from 0 to 9 as equal sums blocks of magic squares of order 4. We used idea of numbers similar to one appears in elevators.

3.1 Numbers 0 and 1

Example 3.1. Below are numbers "0" and "1" written in terms of **pan magic** squares of order 4:

- The letter "8" is formed by consecutive numbers from 1 to 208 resulting in 13 **pan magic** squares of order 4 with equal magic sums $S_{4 \times 4} := 418$ as given in Example 4.9.
- The letter "9" is formed by consecutive numbers from 1 to 192 resulting in 12 **pan magic** squares of order 4 with equal magic sums $S_{4 \times 4} := 386$ as given in Example 4.8.

4 Appendix: Blocks of Magic Square of Order 4

The constructions of letters and numbers given in Sections 2 and 3 are based on blocks of equal sums magic squares of order 4. Below is a process of construction of these blocks. These are from block 5 to block 17.

4.1 5-Blocks

In order to construct 5-blocks of equal sum magic square of order 4 let's divide the numbers from 1 to 80 in five parts giving equal sums.

Distribution 4.1. *Let's distribute the numbers 1 to 80 in five parts giving equal sums:*

A1	1	10	11	20	21	30	31	40	41	50	51	60	61	70	71	80	648
A2	2	9	12	19	22	29	32	39	42	49	52	59	62	69	72	79	648
A3	3	8	13	18	23	28	33	38	43	48	53	58	63	68	73	78	648
A4	4	7	14	17	24	27	34	37	44	47	54	57	64	67	74	77	648
A5	5	6	15	16	25	26	35	36	45	46	55	56	65	66	75	76	648

According to above five rows A1 to A5, the example below give 5 magic squares of equal magic sums.

Example 4.1. *Applying the values given in Distribution 4.1 over the magic square of order 4 given in Example 1.1, we get the following five magic squares of equal magic sums:*

(A1)		162	162	162	162
	1	40	61	60	162
162	70	51	10	31	162

4.2 6-Blocks

In order to construct 6-blocks of equal sum magic square of order 4 let's divide the numbers from 1 to 96 in six parts giving equal sums.

Distribution 4.2. *Let's distribute the numbers 1 to 96 in six parts giving equal sums*

A1	1	12	13	24	25	36	37	48	49	60	61	72	73	84	85	96	776
A2	2	11	14	23	26	35	38	47	50	59	62	71	74	83	86	95	776

4.4 8-Blocks

In order to construct 8-blocks of equal sum magic square of order 4 let's divide the numbers from 1 to 128 in eight parts giving equal sums.

Distribution 4.4. Let's distribute the numbers 1 to 128 in eight parts giving equal sums

A1	1	16	17	32	33	48	49	64	65	80	81	96	97	112	113	128	1032

4.5 9-Blocks

In order to construct 9-blocks of equal sum magic square of order 4 let's divide the numbers from 1 to 144 in nine parts giving equal sums.

Distribution 4.5. Let's distribute the numbers 1 to 144 in nine parts giving equal sums:

A1	1	18	19	36	37	54	55	72	73	90	91	108	109	126	127	144	1160

4.6 10-Blocks

In order to construct 10-blocks of equal sum magic square of order 4 let's divide the numbers from 1 to 160 in ten parts giving equal sums.

Distribution 4.6. *Let's distribute the numbers 1 to 160 in ten parts giving equal sums:*

A1	1	20	21	40	41	60	61	80	81	100	101	120	121	140	141	160	1288

4.8 12-Blocks

In order to construct 12-blocks of equal sum magic square of order 4 let's divide the numbers from 1 to 192 in 12 parts giving equal sums.

Distribution 4.8. *Let's distribute the numbers 1 to 192 in 12 parts giving equal sums:*

4.13 17-Blocks

In order to construct 17-blocks of equal sum magic square of order 4 let's divide the numbers from 1 to 272 in 17 parts giving equal sums.

Distribution 4.13. *Let's distribute the numbers 1 to 272 in 17 parts giving equal sums:*

According to above eight rows A1 to A17, the example below give 17 magic squares of equal magic sums.

Example 4.13. Applying the values given in Distribution 4.13 over the magic square of order 4 given in Example 1.1, we get following 17 magic squares of equal magic sums:

5 Final Comments

This work brings 26 letters from A to Z and 10 numbers from 0 to 9 in terms of blocks of magic squares of order 4. Letters and numbers are constructed with blocks of equal sums magic square of order 4. The most

of the letters and numbers constructed are with 5-blocks hight. The table below give an idea of block-wise construction of letters and numbers:

Consecutive Numbers	Number of Blocks	Equal Magic Sums of Order 4	Letters	Numbers
1-80	5	162	I	1
1-96	6	194		
1-112	7	226	I; L; T	7
1-128	8	258	F; J; Y	2; 3; 5
1-144	9	290	C; V; X; Z	4
1-160	10	322	D; E; G; K; P	
1-176	11	354	C; G; H; S; U	2; 3; 5
1-192	12	386	A; D; O; R	0; 6; 9
1-208	13	418	M; N; Q; W	8
1-224	14	450		
1-240	15	482	M; W	
1-256	16	514	B; G	
1-272	17	546	B	

By no way, we can say that the these are the only possible ways. These constructions can be done in different ways too. The next works are dedicated to the constructions of letters and numbers using equal sums magic squares of orders 6 and 8.

During past years the author worked with magic squares in different situations. See below the details:

5.1 Author's Contributions to Magic Squares

The item-wise author's work on magic squares is as follows:

- (i) **Digital numbers** magic squares - [1, 2, 3, 4, 5, 6];
- (ii) **Block-wise construction of bimagic squares** - [7];
- (iii) Connections with **genetic tables** and **Shannon's entropy** - [8];
- (iv) **Selfie** and **palindromic-type** magic squares - [9];
- (v) **Intervally distributed** and **block-wise** magic squares - [10, 11, 12];
- (vi) **Multi-digits** magic squares - [13];
- (vii) **Perfect square sum** magic squares with **uniformity, minimum sum** and **Pythagorean triples** - [14, 15];
- (viii) **Block-wise equal sums pan magic squares of order $4k$** - [16];
- (ix) **Block-wise equal and unequal sums magic squares of order $3k$** - [17, 18];
- (x) **Magic rectangles** in construction of **block-wise pan magic squares** - [19];
- (xi) **Magic Crosses:** Repeated and Non Repeated Entries - [20].
