Abstract

During past years, author studied different types of "selfie numbers", with extra operations as, factorial, square-root, Fibonacci sequence values, etc. This paper brings "selfie numbers" in terms of "binomial coefficients" formula. This has been done in digit's order, reverse order of digits and both ways also. The results are limited only up to five digits.

The work is divided in following sections and subsections:

- 1 Selfie Numbers;
- 2 Selfie Numbers and Binomial Coefficients;
 - 2.1 Both Ways Representations;
 - 2.2 Digit's Order;
 - 2.2.1 Sequential Representations;
 - 2.2.2 Non Sequential Representations;
 - 2.3 Reverse Order of Digits;
 - 2.3.1 Sequential Representations;
 - 2.3.2 Non Sequential Representations.

1 Selfie Numbers

If a number can be represented by same digits with some operations, then we call it "Selfie number". There are two possibilities, one in order of digits and another in reverse order of digits. See below some examples:

$$\begin{aligned} 331779 &:= 3 + (31 - 7)^{\sqrt{7+9}} = \sqrt{9} + (7 \times 7 - 1)^3 \times 3. \\ 342995 &:= (3^4 - 2 - 9)^{\sqrt{9}} - 5 = -5 + (-9 + 9^2 - \sqrt{4})^3. \\ 759375 &:= (-7 + 59 - 37)^5 = (5 + 7 + 3)^{\sqrt{9}-5+7}. \\ 759381 &:= 7 + (5 \times \sqrt{9})^{-3+8} - 1 = -1 + (8 \times 3 - 9)^5 + 7. \end{aligned}$$

Below are interesting numbers following sequential order left side. See below:

$$\begin{aligned} 456 &:= 4 \times (5! - 6) = (-6 + 5!) \times 4. \\ 3456 &:= 3!! \times 4/5 \times 6 = 6!/5 \times 4 \times 3!!. \\ 34567 &:= (3 + 45) \times 6! + 7 = 7 + 6! \times (5 + 43). \\ 345678 &:= (3! - \sqrt{4}) \times 5! \times 6! + 78. \end{aligned}$$

For full details, refer to link [4, 5, 6, 7, 8, 9, 10, 11, 12]. Selfie numbers with Fibonacci sequence values can be seen in [13, 14, 15].

Below are some examples, just with "factorial" [16, 17]:

In this paper, we shall write selfie numbers with "**binomial coefficients**". Some work on numbers can be seen in [1, 2, 3]. Author's work on numbers is summarized in [18].

2 Selfie Numbers and Binomial Coefficients

It is well known that "**binomial coefficients**" are defined as

$$C(n, r) = \frac{n!}{r! \times (n-r)!}, \quad n \geq r.$$

The above formula is well known in mathematics, specially in probability, statistics, combinatorics, etc. We shall give selfie numbers in terms of binomial coefficients in three different ways:

- (i) The numbers written in order of digits and reverse together;
- (ii) In order of digits;
- (iii) In reverse order of digits.

2.3 Reverse Order of Digits

This section deals with selfie numbers written in terms of binomial coefficients, but in reverse order of digits. The first subsection give numbers in sequential way while the second subsection given non sequential representations.
